

# Exploring measures

## Get wet!

Explore capacity by giving your child a range of containers of varying shapes and sizes in the bath. Use capacity language such as full and empty as they play.

## Do some baking!

Baking is a great way of exploring maths in a practical way.

Use the weighing scales as you bake talking about heavy, light and balance.

## Make a height chart

This could be as simple as measure how tall your child is against a wall and taking a picture and sticking it at that point. Then you can create a height chart over time, giving children photos to talk about and explore as they grow.

You could also add their siblings so they can compare!

Measure lots of things in lots of different ways!
